

Present: Alexei, Flemming, Gene, Mike, Tonko, Jim, Yuri, and myself

== Hardware

- recovered survey probe
 - silicon detector is currently out and obstructs some of the survey points
 - proposes delaying TPC survey by ~2 weeks
- Alexei on vacation for a week next week
- Discussed how to remove TPC anode wire(s) for examination
 - several possible approaches
 - will package in clean room bag
 - will get wires from inner part of sector and outer part of sector

== Electronics (Flemming)

- Christian and Tim still working on fixing RDOs (~6 recovered just by reprogramming)
 - still several that need to be removed to be repaired
- Most work being done on east side (where most problems were)
- moving on with VHDL of outer sectors for DAQ upgrade
- currently at 4.9 kHz (internal goal is 7 kHz)
- memory upgrade for old PCs is done
 - spares from Richard have arrived and are in storage

== Software

- will update on dE/dx next week
 - finished first pass
 - trying to recover momentum dependency
 - will cross-check to make sure new calibration is an improvement
- Tommy running some software tools from Yuri
 - will test new vs old cluster finder
 - Tonko sent interface for testing, needs feedback

== AOB

- Jim will give the STAR run report at user's meeting
 - asking for input material
 - talk will be very run specific
 - Flemming and Alexei mentioned information from recent retreat (Flemming's talk)
 - Please send further suggestions directly to Jim
